

Expt-3:**Map Reduce program to process a weather dataset.****AIM:**

To implement MapReduce program to process a weather dataset.

PROCEDURE:**1. Create Weather Dataset:**

```
nano weather_data.txt
```

Example content:

```
20220101 30.5
```

```
20220102 29.8
```

2. Mapper Program (mapper.py):

```
#!/usr/bin/env python3
import sys
for line in sys.stdin:
    line = line.strip()
    month = line[4:6] # Extracting month
    temp = line[7:11] # Extracting temperature
    print(f'{month}\t{temp}')
```

3. Reducer Program (reducer.py):

```
#!/usr/bin/env python3
import sys

current_month = None
current_max_temp = -float('inf')

for line in sys.stdin:
    line = line.strip()
    month, temp = line.split('\t')
```

```
try:
    temp = float(temp)
except ValueError:
    continue

if current_month == month:
    current_max_temp = max(current_max_temp, temp)
else:
    if current_month:
        print(f'{current_month}\t{current_max_temp}')
    current_month = month
    current_max_temp = temp

if current_month == month:
    print(f'{current_month}\t{current_max_temp}')
```

4. Run the Program:

```
hdfs dfs -mkdir /weatherdata

hdfs dfs -copyFromLocal weather_data.txt /weatherdata

hadoop jar $HADOOP_HOME/share/hadoop/tools/lib/hadoop-streaming-*.jar \
-input /weatherdata/weather_data.txt \
-output /weatherdata/output \
-mapper mapper.py \
-reducer reducer.py
```

5. Check Output:

```
hdfs dfs -cat /weatherdata/output/part-00000
```

OUTPUT:

```
yzm318@Ubuntu:~$ hdfs dfs -cat /weatherdata/output/part-00000
2024-10-10 12:33:34,588 WARN util.NativeCodeLoader: Unable to load native-hadoop library for your platform... using builtin-java classes where applicable
01      -2.9
02       9.3
03      10.4
04      15.7
05      20.1
06      28.3
07      28.2
08      28.4

RESULT:

Thus, the program for weather dataset using Map Reduce has been executed successfully.
